ST2195 Coursework Project - Questions and Clarifications

1. Report - Page limit of 10 pages. Is this for R and Python answers combined in one report?
   - Yes. Just to clarify that this doesn't include the code which is to be submitted separately.

2. Report - What is the font (e.g., Times New Roman, etc) and font size (e.g., 10pt, 11pt, 12pt, etc.) to use?
   - Any reasonable choice of font and font size would do.

3. Report - What is the line spacing to use (e.g., single, 1.5, 2, etc.)?
   - Again, no restriction here.

4. Report - What is the referencing style to use (e.g., Harvard, APA, etc.)?
   - Any reasonable style would do.

5. Report - What should the introduction section of the report include?
   - This is for students to figure out.

6. RMarkdown file and Jupyter notebook
   a. Do students need to submit 1 RMarkdown file and 1 Jupyter notebook for each of the 5 questions (i.e., total 10 files)? What about code that covers tasks such as setting up databases, data wrangling/cleaning? Does that go into an additional RMarkdown file and Jupyter notebook?
   b. Alternatively, can students submit just 1 RMarkdown file and 1 Jupyter notebook covering everything?
   - It would be better if students submitted 1 RMarkdown file and 1 Jupyter notebook covering everything.
